CL Series

20 A 600 V; transformer rated

Product specifications

- Conductor range: 14–10 AWG
- Aluminum tunnel type connectors for both load and line sides
- Circuit closing feature to short out current transformer upon removal of meter
- For overhead hub opening only
- Supplied with screw type ring
- Weatherproof Type 3R enclosure

CT Series

20 A 600 V; transformer rated with compartment for test switch

Product specifications

- Conductor range: 14–10 AWG
- Tunnel type connectors for both load and line sides
- For underground service only
- Meter compartment cover overlaps lower test switch compartment cover; insertion of meter securely holds upper cover in place by means of a catch
- Lower test switch compartment cover securely held by upper cover and a catch at bottom
- A removable mounting bridge is provided for fastening test switch
- Supplied with screw type ring

BA3 Series

100 A 600 V; shallow

Product specifications

- Conductor range: 6–2 AWG
Neutral Conductor Range: 1/0-14 AWG
Ground Conductor Range: 2-14 AWG
- Aluminum tunnel type connectors for both load and line sides
- For overhead, underground and combination overhead/underground

- Supplied with screw type ring
- Weatherproof Type 3R enclosure

Note: Supply from an underground network often requires use of stud type connector. Consult your local utility.

Product specifications

- Conductor range: line: 6 AWG–250 kcmil, load: 6–1/0 AWG
- Aluminum tunnel type connectors for both line and load sides
- Factory prebussed from main lugs to each position
- Combination overhead-underground supplied with hub opening closure plate for underground service
- Hubs to be ordered separately (refer to pages D57–D58)
- Supplied with screw type rings
- Weatherproof Type 3R enclosure

CO1 Series

100 A 120/240 V; combination with or without breaker

Product specifications

- Conductor range (line and load): 6–1/0 AWG
- Aluminum tunnel type connectors for both load and line sides
- For overhead installation
- For underground installation, gutter option must be ordered (G)
- With factory-installed neutral conductor
- Suitable for 120/240 V single-phase service entrance for residential locations, mobile homes, trailers, temporary services, recreational parks and other commercial locations
- All units shipped complete with breaker will be supplied with either Siemens type Q (QP) OR GE type THQL (THHQL)
- Bottom compartment has provision for 2 pole circuit breaker (max 100 A) 10 Ka breakers (22 kA breaker where indicated HI) Siemens (QP, QPH), Eaton (BR), GE (TQL). Only SQD (CHOM) breakers will fit units with suffix SD.
- Supplied with screw type rings
- Weatherproof Type 3R enclosure

- Overhead only – tunnel type connectors for both load and line sides
- Underground only – aluminum tunnel type connector load side (6-1/0 AWG), line side ½ in. studs
- Supplied with screw type rings
- Weatherproof Type 3R enclosure
- All units shipped complete with breaker will be supplied with either Siemens type Q (QP) OR GE type THQL (THHQL)
- Bottom compartment has provision for 2 pole circuit breaker (max 100 A) 10 kA breakers (22 kA breaker where indicated HI) Siemens (Q), Eaton (BR), GE (TQL). Only SQD (QO) breakers will fit units with suffix SD.

HD1

100 A 120/240 V; flat rate services junction box

Product specifications

- 100 A, 120/240 V single-phase weatherproof junction box for flat rate services fed underground such as telephone booths, plastic signs, bus shelters, etc.
- Aluminum tunnel type connector for line side
- Conductor Range: 6 - 2 AWG
- Bottom compartment has 2 in., 2½ in., 3 in., 3½ in. KOs and ⅜ in. (load side) studs to accommodate compression lugs (supplied by utility)
- Top compartment has provision for ABB, Siemens, G.E., Westinghouse type “Q” 2 pole breaker
- Weatherproof Type 3R enclosure

Microelectric

Highly corrosion-resistant meter sockets

For challenging environmental conditions, such as coastal zones, where corrosion can significantly shorten product life expectancy, Microelectric corrosion-resistant meter sockets are the solution.

The CR (Corrosion Resistant) option is now available on three of our best-selling meter sockets: the BQ2, BE1 and BS2 Series. The CR option offers homeowners durability, functionality and peace of mind for years to come with no more prematurely rusted-out enclosures! With the CR option, meter sockets withstand environmental corrosion and enclosure remain rust-free longer.

Corrosion-resistant option on selected Microelectric BQ2, BE1 and BS2 models

- Designed and manufactured in Canada for the Canadian climate – withstands temperature variations from -40°C to 90°C
- Superior resistance to corrosion in all types of environments – ideally suited for coastal and industrial areas
- Suitable for both overhead and underground installations – reduces inventory requirements
- Robust galvanized steel construction
- New elegant and distinctive colour identifies CR option meter sockets

BQ2 Series

200 A 600 V; standard enclosure

Product specifications

- Conductor range: 6 AWG–250 kcmil
- Aluminum tunnel type connectors for both load and line sides
- For overhead, underground and combination overhead/underground

- Supplied with screw type ring
- Weatherproof Type 3R enclosure

Note: Supply from an underground network often requires use of stud type connector. Consult your local utility.

CO22 Series

200 A (main lugs), 200 A per position, single-phase 120/240 V; multiple position combination with or without breaker

Product specifications

- Conductor range: line: 6 AWG–250 kcmil, load side
Conductor range: for ABB SACE A1A/A1N:4-1AWG or ABB SACE A2A/A2N:1 AWG-250 kcmil. For other approved circuit breakers, see manufacturer specifications. For load side, neutral side, conductor range: 6AWG-250 kcmil
- Aluminum tunnel type connectors for both load and line sides
- For overhead and underground services
- Factory pre-bussed from main lugs to each position
- Supplied with hub opening closure plate for underground service
- Internal locking system for covers
- Supplied with screw type sealing rings
- Factory installed 2 pole 10KA OR 22 KA (HI) breakers either an ABB or Siemens
- Eaton type ED breakers
- Factory installed adjustable bracket for field installation of Siemens type QJ(L), QJH(L), QR(L) and QRH(L), SQD type QBL, Eaton type ED
- Conductor kits are available to facilitate field installation of Siemens type QJ(L), QJH(L), QR(L) and QRH(L), SQD type QBL, Eaton type ED(L), refer to page D61
- Weatherproof Type 3R enclosure

Product specifications

- 320 A 240 V maximum self-contained meter socket with bypass mechanism
- Single-phase service
- Weatherproof type 3R enclosure
- Connection to 1 or 2 electrical distribution for a nominal load of 320A

- Allow grounding at the electrical panel or meter socket
- Easy conversion to an insulated neutral by removing the bonding jumper
- Supplied with screw type sealing ring
- Underground versions require the use of compression lugs on the line side
- Made in Canada

JS4B

KIT-400MH
(see page D71)

Product specifications

- Approved for use with field-installed conductor sized as per CE Code, Part 1 Allowable Ampacity Column 90°C for 3 conductors in raceway
- Load side terminations: tunnel type connectors, dual rated for 1 x 500 kcmil or 2 x 250 kcmil
- Fully wired secondary circuits
- Line side terminations: double 1/2 in. studs to accommodate compression lugs for underground service (1 x 500 kcmil or 2 x 250 kcmil)
- Permanent red nameplate affixed to front cover warns that removal of meter does not isolate the load terminals; warning to short circuit current transformer secondary before removal of meter on JS4B
- Meter socket configuration for 5 jaw meters (can be readily converted to suit meter forms requiring 4 blades)
- 400/5 A three-wire current transformer provides low current for service metering proportional to higher current draw; Consumer and Corporate Affairs Canada approved for revenue metering (200/5 and 300/5 A also available)

- Gutter wiring space provided on left side
- Twin covers allow access to either compartment (single cover available on request)
- Hub opening closure plate for underground service (All units can be converted to overhead service with addition of conduit hub and JS250 or JS500 tunnel type connector kit)
- Hinged bridges and readily removable crossbar with keyholes permit easy wiring without obstructions
- Heavy gauge galvanized steel with oven-cured grey enamel finish
- For aluminum JS4, see page D49 for product specs and dimensions
- Weatherproof Type 3R enclosure
- Provincial approval may change without notice. Consult your local utility.

B3/8-6	2 bolts 3/8 x 6 in. long, complete with 1 washer, 1 lockwasher and 1 nut finished hot galv.	100	45.35	5

Add suffix "NI" if insulator is not required. Constructed of 1 1/4 in. x 1/2 in. x 3/8 in. steel channel, has 3/8 in. diam. pin and comes with catalog no. IB135 insulator, 1 1/8 in. round mounting hole. All ferrous parts are hot dip galvanized.

Québec Construction Code, Chapter V – Electricity, Article 6-112 (6) requires that the spool rack be tightly bolted and attached to structural members of a minimum thickness of 88 mm overall, if the framed structure is made of wood.

Hydro-Québec, Low-Voltage Electrical Service, Standard E21-10, Article 2.2.1, 2.2.2 and Blue Book read as follows:

2.2.1 Supply and installation

The master electrician shall, at the customer's expense, supply and install the spool rack in accordance with Code requirements and with the recommendations of the Régie du bâtiment du Québec, particularly to avoid any problem due to vibrations. The customer retains ownership of the spool rack.

2.2.2 Location

The spool rack may be attached to the exterior wall of a building or to a customer pole, service mast or other support structure. The master electrician shall ensure that the service loop is secured firmly to the building in a location not conducive to vibrations, and shall strengthen the structure, if necessary, at the customer's expense. The location must also allow the meter to be installed in a readily accessible place.

Nonmetallic pole riser system

01 Steel U-guard requires grounding strapping and does not have belled ends.

01

02 PV-Mold has belled ends, flanged design and does not require grounding.

02

Carlton PV-Mold is a nonmetallic pole riser system designed to protect communications power cable installed on poles.

Product specifications

- Meets or exceeds requirements outlined in the National Electric Safety Code (NESC)
- Designed in accordance with NEMA TC-19 specifications
- Ultraviolet, cold-temperature and corrosive-atmosphere resistant
- No grounding required
- Belled end fits over each added section or conduit
- Requires no maintenance
- PV-Mold acts as an insulator against electrical shock
- Interchangeable parts and accessories to match specific requirements

Polyethylene vented boots and adapters

Note:

1. A field cut may be needed to accommodate different boot or adapter to Carlson U-Mold size combinations.
2. Recommendation: 2 sets of mounting holes per boot/fitting. To add mounting holes, use a 3/8 in. drill bit and drill out where needed.
3. When 3 in. or smaller conduit is being used, it's recommended that the bottom (largest section) of the boot or adapter section be buried 2 in. to 3 in. below ground surface.

PV-Mold installation instructions

Installation is easy with PV-Mold pole risers:

1. Install ventilator or duct to riser fittings at the base of the pole.
2. Nail backing plate sections to the surface of the pole. Three nail holes are provided in each section. Place the "U" sections over the cable and backing plate, with belled end at the bottom, and attach using 3/4 in. lag bolts.

Field installation instructions for Carlson PV-Mold adapters (for adapters E939JN, E939NR, E939NRT)

E939JN

To transition from 4 in. conduit to 2 in. PV-Mold	Place adapter over conduit, attach to pole using the top and bottom mounting holes, place PV-Mold over top section of adapter and secure PV-Mold to pole.
To transition from 4 in. conduit to 3 in. PV-Mold	Measure 6.3 in. up from bottom (large end) of adapter and cut. Assemble to pole as described above.
To transition from 3 in. conduit to 2 in. PV-Mold*	Measure 4.75 in. up from bottom (large end) of adapter and cut. Assemble to pole as described above.

E939NR

To transition from 5 in. conduit to 4 in. PV-Mold	Place adapter over conduit, attach to pole using the top and bottom mounting holes, place PV-Mold over top section of adapter and secure PV-Mold to pole.
To transition from 6 in. conduit to 5 in. PV-Mold	Measure 7.25 in. up from bottom (large end) of adapter and cut. Assemble to pole as described above.
To transition from 5 in. conduit to 5 in. PV-Mold*	Measure 4.5 in. down from the top of adapter and cut. Assemble to pole as described above.

E939NRT

To transition from 6 in. conduit to 4 in. PV-Mold	Place adapter over conduit and attach to pole using the top and bottom mounting holes. Place PV-Mold over top section of adapter and secure PV-Mold to pole.
To transition from 6 in. conduit to 5 in. PV-Mold	Measure 5.25 in. down from the top of the adapter and cut. Assemble to pole as described above.
To transition from 6 in. conduit to 6 in. PV-Mold*	Measure 9.5 in. up from the bottom of the adapter and cut. Assemble to pole as described above.

* For these transitions, it is not necessary to cut the adapter if desired. If the adapter is not modified, it is recommended that the bottom 3 in. of the adapter be buried below grade.

Place vented boot over conduit, attach to pole using the top and bottom mounting holes, place PV-Mold over top section of vented boot and secure PV-Mold to pole.

To transition from 5 in. or smaller conduit to 3 in. and larger PV-Mold

For 3 in. PV-Mold: Measure 3.75 in. from the top of the boot and cut. Place the boot over the conduit and attach to the pole. Place belled end of PV-Mold over the top end of the boot and secure.

For 4 in. and 5 in. PV-Mold: Measure 12 in. up from the bottom of the boot and cut. Place the boot over the conduit and attach to the pole. Place the belled end of the PV-Mold against the top edge of the vent protrusion and secure to the pole.

E938NT

To transition from 6 in. to 8 in. conduit to 4 in. PV-Mold

Place boot over conduit and attach to the pole using the mounting holes. Place PV-Mold over top section of vented boot and secure to the pole.

It is recommended that for conduit sizes smaller than 8 in., the bottom 3 in. of the boot be buried below grade. The E938NT can also be used to transition multiple smaller conduits to PV-Mold.

E938NRR

To transition from 6 in. or smaller conduit to 4 in. PV-Mold

Place vented boot over conduit and attach to pole using the top and bottom mounting holes. Place PV-Mold over top section of vented boot and secure PV-Mold to pole.

To transition from 6 in. or smaller conduit to 5 in. PV-Mold

Measure 4.125 in. down from the top of the vented boot and cut. Assemble to pole as described above.

To transition from 6 in. or smaller conduit to 6 in. PV-Mold*

Measure 8.25 in. down from the top of the vented boot and cut. Assemble to pole as described above.

E938PRR

To transition from 6 in. or smaller conduit to 5 in. PV-Mold

Assemble to pole as described above.

* For these transitions, it is not necessary to cut the adapter if desired. If the adapter is not modified, it is recommended that the bottom 3 in. of the adapter be buried below grade.

Copper bonded steel ground rods

- All EZGround ground rods have a heavy uniform covering of electrolytic copper bonded to a rigid steel core
- Copper ions are forced electrically to join with the steel core, establishing a corrosion-resistant bond between the copper and the steel

Threadless couplings and driving caps for standard copper bonded ground rods

Threadless couplings

- For joining non-threaded, sectional, copper bonded, steel ground rods
- Coupling is manufactured of a high-strength, corrosion resistant, silicone bronze

Threadless driving caps

- Prevent “mushrooming” of ground rod while driving to ensure proper fit of coupling
- Driving cap is manufactured of high-strength, hardened steel

EZGround types of connectors used in Microelectric meter sockets

Tunnel type connector

A tunnel type connector is made of aluminum and is ideally suited for grounding and bonding applications accommodating both copper and aluminum conductor size #6 AWG to 250 kcmil.

Dual tunnel type connector

A tunnel type connector is made of aluminum and is ideally suited for grounding and bonding applications accommodating both copper and aluminum conductor size #6 AWG to 250 kcmil.

Stud connector

Stud connector is made of zinc-plated steel suited for copper or aluminum wire sizes of #6 AWG to 350 kcmil. Connector is comprised of a stud nut, washer and bell nut.

Lay-in type connector

A lay-in lug is made of aluminum and is ideally suited for grounding and bonding applications accommodating both copper and aluminum conductor sizes #14 AWG to 250 kcmil.

Compression lug

Made of high-conductivity wrought copper. Supplied by utility based on wire size requirements.
